PURR-SONALITY, CATITUDE, & HISS-TORY:

PERSONALITY:

Not generally a nervous cat. She is spoiled and knows it. Use to being paid attention too and not beign left alone for long. Perfers coves/caves rather than height. Has reached the point where she perfers quiet and company rather than toys and noise.

Sassy when annoyed

She knows she has no claws so she will strike first with as much "omph" as she can to warn you. If she has resorting to biting, she means business and has had enough. Not prone to agressiveness but isn't afride to show her displeasure at something but she settles down well after she is left alone if she is exhibiting the above behaviours

ATTITUDE:

She loves company, she wants you to just be around her and exist with her.

Favorite place to be pet is, neck, shoulder, and chin. Only trusted or invited may touch or groom her upper back.

Fun Fact: If you catch her when she is relaxed and gently touch between her back claws (like the webbing), she will spread her claws for a gentle paw massage and stress free nail trimming. Or if you just want to give her a little massage and no trim, she perfers that more...
